

Maintenance Service Agreements

Maintenance Service Agreements

As part of Vericor's complete aftermarket support of fielded industrial, power generation and oil & gas engine fleets, customers may select a maintenance service agreement (MSA) or have one tailored to their specific operations.

A Vericor MSA provides the peace of mind of knowing what the maintenance costs will be each year for your Vericor gas turbine.

Vericor's MSA's are offered at three different levels ranging from nearly independent customer operation to full maintenance support from Vericor, with the option to customize services based on the unique needs and requirements of the customer.

The three MSA levels, Silver, Gold and Platinum are differentiated in the table below.

In all cases, the goal of the MSA is to minimize life cycle cost through the life of the engine with direct involvement by the Vericor technical team.

MSA Key Features

- Can be tailored to individual operator requirements, location and equipment type
- Offered as part of initial sale package
- Sets predetermined parts or parts & labor costs based on engine operating hours
- Can apply to both scheduled and unscheduled maintenance
- Routine engine performance data collection
- Proactive maintenance & service reminders
- Potential volume discount for multi engine customers
- Priority access to spares reduces downtime
- Can include training for the operation & maintenance of the engine & equipment
- Regular service bulletin and product improvement notifications
- Access to rotating pool of repaired LRUs and commonly replaced items
- Access to bank engine for scheduled & unscheduled engine removals
- On-Site technical review meetings
